

**Tris-buffered saline (TBS)
(10X)
Cat# BB-BS35 (500ml)**

Description: BBL-TRIS-buffered saline (TBS, 10X) is a common pH-stabilizing biological buffer due to its low toxicity. TBS is an excellent wash buffer for many immunoassays, including protein purification, Western blot, and ELISA. TBS buffer interacts favorably with antibodies and is commonly used in immunoassay and immunostaining procedures, such as in washing, blotting and diluting.

Applications:

- used as a substance diluent
- Used as a wash buffer in immunoassays such as enzyme-linked immunosorbent assay
- Used as antibody diluent in western blotting
- Used as a sample diluent in vitro diagnostics, immuno-histochemical staining and in situ hybridization

Storage: 2-8°C

For Research Use Only. Not for use in diagnostic procedures.
